

FACTORY-BUILT & AFTERMARKET NATURAL GAS VEHICLES

NEW
Manufactured in Canada or imported into Canada. Natural gas fuel system is installed prior to 1st sale at factory or by an authorized 3rd party.

EXISTING
Natural gas fuel system is installed after 1st retail sale.

NOTES

1. Current Canadian vehicle regulations and vehicle codes address CNG vehicles and CNG fuel systems, but not LNG vehicles and LNG fuel systems. The potential to include LNG vehicles and LNG fuel systems within the scope of existing regulations and codes is currently under review.

2. Most provinces have anti-tampering regulations for on-road vehicles which prohibit the removal or disabling of emission control devices. An aftermarket natural gas vehicle conversion falls under these regulations since the conversion uses replacement emission control systems and components. Fleets should confirm that the conversion shop uses EPA-certified kits installed by qualified personnel in order to ensure satisfactory emissions performance.

This product is made possible by a financial contribution from Natural Resources Canada.
